

\*06.06.1993 in Wigginsbach, lives in Halle (Saale) since 2015.

Scientific themes from biology, ecology and chemistry play a major role in my artistic work. Their complex processes inspire me to approach processes in an artistic-research way and to put them into a new context. With photographs, sculptures, drawings, experiments, videos, sound and texts, I create relationships between individual themes that at first glance may have little to do with each other. Although a scientific approach is often the basis of my work, I always move between a tension field of authenticity and fiction. This offers me the opportunity to show natural phenomena in a different, subjective form of truth and to evoke my own associations in the viewers.
